ADHD and the Spoon Theory

by NEWLIFEOUTLOOK TEAM

Understanding the Spoon Theory

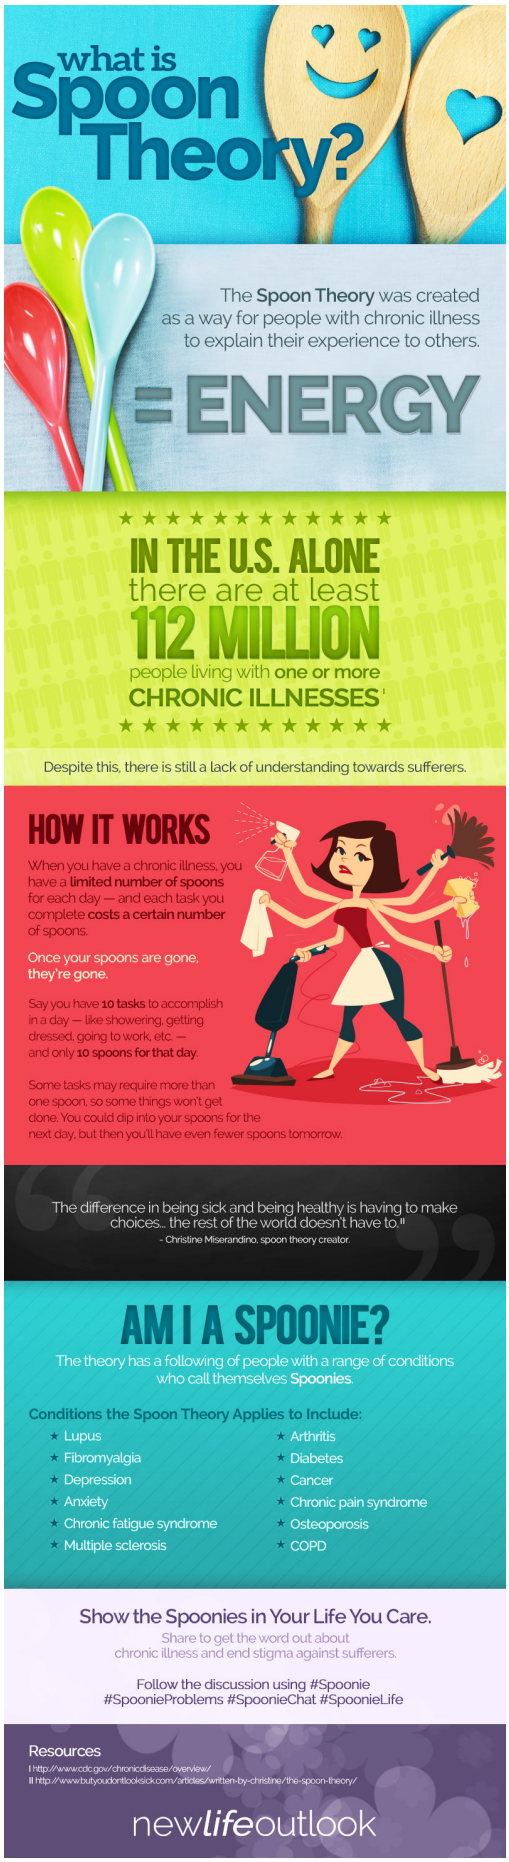

When dealing with attention deficit hyperactivity disorder (ADHD), explaining yourself is a constant reality. Explaining your behavior, experiences, and related pain seems to be a necessary evil to make people understand chronic illness.

People with chronic illness across the globe are now using Christine Miserandino's spoon theory to help others better understand what they're going through.

As the story goes, Christine was trying to make her friend understand her experiences with lupus. She used spoons as a representation of energy, saying each activity she does in a day "costs" a certain amount of spoons.

A typical "healthy" person has a high or unlimited amount of spoons, but those with chronic illness must pace themselves and plan their day according to the amount of spoons they hold.

Read on to learn more about the spoon theory and how to join the conversation.

what is Spoon Theory?
The Spoon Theory was created as a way for people with chronic illness to explain their experience to others.
= ENERGY
IN THE U.S. ALONE there are at least 112 MILLION people living with one or more CHRONIC ILLNESSES[1]
Despite this, there is still a lack of understanding towards sufferers.
HOW IT WORKS
When you have a chronic illness, you have a limited number of spoons for each day — and each task you complete costs a certain number of spoons.
Once your spoons are gone, they're gone.
Say you have 10 tasks to accomplish in a day — like showering, getting dressed, going to work, etc. — and only 10 spoons for that day.
Some tasks may require more than one spoon, so some things won't get done. You could dip into your spoons for the next day, but then you'll have even fewer spoons tomorrow.
The difference in being sick and being healthy is having to make choices... the rest of the world doesn't have to.[II]
- Christine Miserandino, spoon theory creator.
AM I A SPOONIE?
The theory has a following of people with a range of conditions who call themselves Spoonies.
Conditions the Spoon Theory Applies to Include:
Lupus
Fibromyalgia
Depression
Anxiety
Chronic fatigue syndrome
Multiple sclerosis
Arthritis
Diabetes
Cancer
Chronic pain syndrome
Osteoporosis
COPD
Show the Spoonies in Your Life You Care.
Share to get the word out about chronic illness and end stigma against sufferers.
